DOCUMENT TYPE: Article

Suprofen possesses some tissue selectivity with respect to PG biosynthesis. Analgesic combination studies indicated that Suprofen potentiated the activity of paracetamol and narcotic analgesics such as codeine and butorphanol. Clin. studies with Suprofen have demonstrated efficacy in various painful conditions, including general and orthopedic surgery, periodontal surgery, third molar extraction, episiotomy, post partum pain, dysmenorrhea, and musculoskeletal disorders. Suprofen's analgesic profile is characterized by a rapid onset of action with a duration of 4-6 h. Comparative efficacy studies have demonstrated that 200 mg of Suprofen provides pain relief at least equivalent to the combination of 650 mg aspirin and 60 mg codeine.
